

ADHESIVES 101

TRAINING

Knowledge to Make the Most of Adhesives

Your operators work with adhesives daily. But are they taking advantage of all the benefits an adhesive can bring to your operations and product performance? Drawing on our 125+ years of advancing the science and art of creating and using adhesives, our team developed a training session that will give your employees a deeper understanding of what an adhesive is and does, and how it can be used in ways that will positively impact your productivity and customer satisfaction.

WHAT: A customised session led by a Bostik Technical Expert.

WHERE: Your facility or via video conferencing

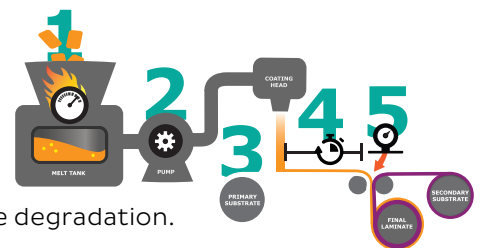

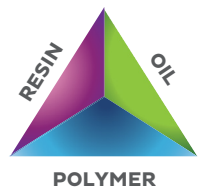

INCLUDES:

Adhesive Introduction. Explains the various types of adhesives, how they function, and their roles in disposable hygiene products.

Development & Manufacturing. Covers a variety of raw materials used in adhesives and their effects; how and why specific materials are selected for adhesive formulation; how adhesives are manufactured and quality control tested to ensure proper performance.

Application. Reviews all the elements of the application system, from applicators to patterns; how to balance and optimise variables for more robust performance; how to recognise and minimise adhesive degradation.

Final Product Testing. Defines how Bostik tests performance for essential adhesive traits like creep, peel, odour, core cracking and more; and offers important troubleshooting tips.

Contact Bostik for availability and associated costs.

SMARTER VALUE.

More knowledgeable employees; optimisation of adhesive applications; improved operations; better product performance
