

ODOUR MEASUREMENT

Expert Training to Measure Product Odour

There are multiple ways to measure odour in disposable hygiene products, but no industry-wide accepted standard method. The best approach is to leverage existing demonstrated best practices through proper training. Bostik offers a unique hands-on session that allows you to develop an expertly trained internal odour panel so your company can measure product odour in a standardised way to provide information on intensity, description, and like or dislike.

WHAT: Half-day or full-day session led by a Bostik odour expert

WHERE: Your facility

INCLUDES:

Internal Panel Training. An on-site visit from a dedicated Bostik odour expert who conducts a high-level odour training session with members of your team. This allows you to create an internal odour panel to self-serve your odour measurement needs on demand. Opportunities to smell and identify volatiles commonly represented in disposable hygiene products are also included in this session.

Contact Bostik for availability and associated costs.

SMARTER VALUE.

Understand how odours interact; use a common language to describe odours; measure odour intensity so mitigation work can begin; screen for odours using internal resources

Let's get started.
